

SEE WHAT
SMILE CAN
DO FOR YOU.

Understand the facts and benefits
of SMILE®, the latest advancement
in **laser vision correction**.

"Before SMILE, my glasses
were a constant hassle. After
SMILE, I can rock climb, run
and play with my kids with
no worries. My barrier is gone!"

– **SMILE PATIENT**

SMILE AT A GLANCE

LASIK AND SMILE

Understanding the options

Both LASIK and SMILE can help create clearer vision and reduce or eliminate your need for glasses and contacts. Understanding the difference between the two procedures can help you and your surgeon make the right choice for your laser vision correction.

LASIK

- A flap is made on the surface of your eye.
- A laser reshapes your cornea, resulting in clearer vision.
- Rapidly return to daily routine and activities.

SMILE

- A laser creates a thin layer and a tiny opening is made in the cornea.
- The layer is then removed through the tiny opening re-shaping the cornea, resulting in clearer vision.
- Rapidly return to daily routine and activities.

Ask your doctor why
SMILE may be a better
choice for you!

SMILE

Laser Vision Correction for the 21st Century

WHAT IS SMILE?

Both LASIK and SMILE can help create clearer vision and reduce or eliminate your need for glasses and contacts. Understanding the difference between the two procedures can help you and your surgeon make the right choice for your laser vision correction.

WHY IS IT CALLED SMILE?

SMILE is an acronym that stands for "Small Incision Lenticule Extraction." Simply put, a laser is used to create a thin, contact lens- shaped layer just beneath the surface of the eye and then a small opening, through which the layer is removed.

Minimally Invasive Procedure

Your surgeon only needs to make a small, precise opening to correct your vision.

Quick and Proven

SMILE takes only a few minutes from start to finish and people worldwide have experienced clearer vision thanks to SMILE.

Rapid Visual Recovery

Vision recovers quickly after SMILE. Many people return to most of their normal activities the next day.

Eye Comfort

With SMILE, you may experience minimal to no discomfort during and after the procedure.

Freedom from Lenses

SMILE is designed to reduce or eliminate your need for glasses and contacts.

As you're considering laser vision correction, we encourage you to review this information and research your options. We're here to answer any questions you may have about SMILE, or you may visit www.SMILEandSee.com to learn more.
